Reference: Your letter dated 03/03/05, postmarked 3/11/05

Dear Mr. Eugene H. Eickholt:

In response to your letter *I have selected Group A, Figs. 1A-1C as the single species for prosecution. Claims readable upon this species are Claims 1, 2, 3, 4, 5, 6, and 7.*

The distinguishing difference between Group A, Figs. 1A-1C; Group B, Figs. 2A-2B; and Group C, Figs. 3A-3D is in the selection of the transparent medium on which the pictures are printed. Group A would typically be printed on a transparent vellum or vinyl material. For Group B the transparent medium used would be a clear decal material which could be attached to a transparent object such as a glass. For Group C the transparent medium used would be a clear material suitable for cutting.

In addition to demonstrating the use of different transparent media for 2-sided pictures, Groups B and C are also used to demonstrate examples of what can be printed with any 2-sided picture regardless of the transparent medium used.

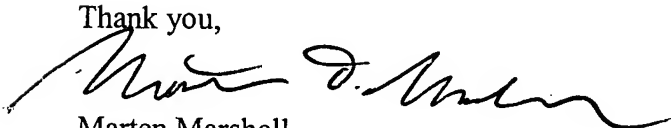

Group B, in addition to demonstrating the use of clear decal material, also shows how to create 2-sided pictures with 2-sided text. Two-sided text could equally be used with Group A or C.

Group C, in addition to showing 2-sided pictures printed on clear material suitable for cutting, also shows how to combine multiple different 2-sided pictures into one 2-sided picture. Combining two different 2-sided pictures into one 2-sided picture could equally be used with Group A or B.

Group D, Fig. 4, is not a separate species but merely a method of solving a potential depth of field problem that may occur in any 2-sided picture. Similarly, Group E, Fig. 5, is not a separate species but is an example of 1 of many types of 2-sided pictures that may be created.

Please advise me if this response in any way fails to meet your requirements to prosecute this case at this time.

Thank you,

Marten Marshall
